DETAILED ACTION

This is the first office action for U.S. Application 10/532,449 for a Paint Brush Holder Consisting of One Part filed on April 22, 2005.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites the limitation "its handle" in lines 3 and 4. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,859,973 to Oranday. Oranday discloses a holder formed of one continuous part from spring material that would allow a user to position and hold a paint brush on the rim of a paint container. The holder has a paint brush receiving section

Art Unit: 3632

(17, 18) for receiving and holding a paint brush and a container engaging section that includes a first part (13, 14) for biasing against the inside wall of the container and a second part (16) for biasing against the outside of a container. The first part together with a transverse limb (15) of the paint brush holder, defines a rectangular shaped section that is longer than the profile of the second part, whereby in use, when the holder is attached to a container, the holder grips the container with the first part extending downwardly along the inside wall of the container and the paint brush holder allowing placement of a paint brush in a position where bristles of the paint brush are within the rim of a paint container. The container engaging section includes two container engaging parts (each side of the wire) for resting on the rim of the container and the second part of the container engaging section has a lever section formed to allow the holder to be gripped by a user's thumb and finger, whereby when the first part is placed on the inside of the container and the lever section is held and pulled away, the holder can be pushed downwards onto the container to locate the first part along the inside wall of the container and the second part along the outside wall of the container such that when the lever portion is released, the holder grips the container. The paint brush in the holder could be surrounded at four points to inhibit lateral movement of the paint brush and allow a user to carry a container by its handle.

Allowable Subject Matter

Art Unit: 3632

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5035386 to Tucker

US 5476240 to McDonough

US 6494417 to Gizzi

US 6820848 to Adam

The above patents disclose wire supporting devices and brush holders.
